Data scientist and full-stack engineer focused on delivering production-ready ML solutions and cloud platforms. Built end-to-end fraud-detection pipelines (feature engineering, model selection, validation, deployment), engineered database-backed financial web applications, launched scalable AWS EC2 deployments, and earned two selections at the Smart India Hackathon.

Career Objective

As an Information Technology engineering student, I am driven by a deep passion for solving real-world problems through data and intelligent systems. I successfully engineered full-stack financial applications and deployed cloud-hosted platforms on AWS, alongside building credit card fraud detection models using machine learning classification algorithms. My technical toolkit spans Python, Java, SQL, Pandas, NumPy, Scikit-learn, MySQL, and Node.js. Accomplished Data Scientist with a passion for delivering valuable data through analytical functions and data retrieval methods.

Skills

- Python
- Data Visualisation
- sklearn
- Git/GitHub
- Data Analysis with R
- MySQL
- Preprocessing
- matplotlib
- Jupyter Notebook
- Pytorch/Tensorflow
- Java
- seaborn
- numpy
- Google Colab
- HTML/CSS/JS
- Machine Learning and EDA
- pandas
- AWS
- Linux
- C/CPP

Education

(B.E.) IT Engineering **Pune, Jun 2024 to Jun 2028**
International Institute of Information Technology

Website Portfolio

Link to Portfolio

Activities and Accomplishments

- **Developed and deployed endtoend credit-card frauddetection pipelines** using Python and scikitlearn; performed feature engineering, model selection and validation to produce reliable classification models for transaction data.
- **Engineered fullstack financial applications** with Node.js backends and MySQL databases; designed RESTful APIs and data workflows to support secure transaction processing and reporting.
- **Launched cloudhosted platforms on AWS EC2,** handling provisioning, deployment and basic monitoring to deliver scalable, accessible services.
- **Recognition:** Selected twice at the Smart India Hackathon for innovative project solutions.
- **Technical toolkit:** Python, Java, SQL, Pandas, NumPy, scikitlearn, MySQL, Node.js, AWS.

Certifications

Database Management System **Jul 2026**
UNSTOP

JavaScript Training **Oct 2026**
SWAYAM Plus

Technical Proficiencies

Data Analytics & Machine Learning:	Python - Pandas & NumPy, Scikit-learn, Exploratory Data Analysis (EDA), Data Visualization (Matplotlib/Seaborn), Database Design, Data Preprocessing
Programming & Technical Tools:	Git/GitHub, Linux, Java (OOP & DSA), Problem Solving, Jupyter Notebook / Google Colab
